

HYBRID AGE – THE TRANSITION TO HUMANITY 2.0

Exploration Topic Fifteen

What to attain from this topic: The Bible predicts a time when the world is enveloped by a time reminiscent of the antediluvian period, that is, the time leading up to the Flood of Noah. Among many other aspects of that time, hybridization, and re-education of humans to create an alternative human species was at the forefront of the effort. The purpose was to transition humanity to something other than human in the Adamic sense. The purpose of this was, and still is, the evolution of humans to something *post human*. The satanic goal is not to destroy humans, it is to evolve them into another species. This ultimately results in mankind losing his eligibility for salvation and opens the door for usurpation of dominion of the planet earth from man.

Thoughts:

Currently, there are two primary streams running parallel to one another as it pertains the effort to evolve mankind from his God-created state. One is the Transhuman thread, a technological approach which encompasses emerging physical technologies and the biological sciences. Ostensibly, the stated goal of Transhumanism is to improve the human condition, that is, reduce suffering, extend life, cure diseases, and the overall betterment of mankind.

Running parallel is the technology and science aspects is a spiritual thread, that is, the metaphysical, philosophical, and religious stream (or an amalgamation of the three things combined). They encompass a goal whose purpose is for mankind to reach his highest potential, spiritually speaking. That man is to evolve into something like a god e.g., a transcendent purpose for mankind. We will become like the gods. Evolution by choice, not by chance.

At a point in time, these two streams will inevitably converge. There will be a merger of the hybrid age technologies, and the theologies so to speak. This will manifest itself as eternal bodies and a new theology based on apotheism (from apotheosis which is to become godlike and theism a belief in the gods).

This will inevitably set the groundwork for the final attempt at the usurpation of man's dominion of the earth.

Technological Trends

- In the early 1960's, the Information Age transformed human society in that it facilitated the rise of another Tower of Babel on Earth. Men of every tribe, tongue, and nation are becoming increasingly unified in language (binary code) and purpose, so that "nothing they plan to do will be impossible for them. [Genesis 11:6](#)

- June 26, 2000, marked the dawn of a post-human paradigm on planet earth. At the White House, President Clinton, along with British Prime Minister Tony Blair, announced that the International **Human Genome Project** and Celera Genomics Corporation have both completed an initial sequencing of the human genome - the genetic blueprint for human beings.
- The Human Genome Project, that is the sequencing of the genome of the human species (the blueprint of Adam's genetic architecture), ushered in the end of humanity as we know it
- Jack is out of the box and he's not going back in...

Enter now the Hybrid Age -

- Men will merge with their machines to transcend the limitations of their bodies
- The computing technology we hold in our hands will be integrated into our brains and we will surf the web with our minds rather than our fingers. Already happening...
- Synthetic organs will be ready for installation in out-patient medical facilities when our natural organs fail
- Cybernetic prosthetics will replace lost or damaged limbs
- Nanobots will patrol our vascular highways to destroy pathogens and provide maintenance to our cells
- Diseases will be cured by editing defective genes
- Superhuman abilities will become possible through genetic engineering
- Our babies will be designed rather than conceived
- Artificial wombs will emancipate women from bearing children and the curse of Eve
- Hereditary genetic disorders will become obsolete
- The average life expectancy in the developed world will soar to over one hundred years

Such is the utopian vision of futurists for the Hybrid Age. Some will come to pass, but not without a price.

Hybrid Technologies

- Over the past few decades there has been an exponential upsurge in the development of what are referred to as Hybrid technologies, also called Emerging technologies
- These technologies individually, are advancing at a breakneck speed along an exponential growth curve predicted by Ray Kurzweil's *Law of Accelerating Returns*

- This law states that technological development in the twenty first century will continue to progress exponentially, meaning that instead of experiencing one hundred years of progress over the course of this century, we will experience the equivalent of 20,000 years
- Currently there are five technologies in particular whose imminent convergence is predicted to merge into what analysts are calling the posthuman revolution
- These are the amalgamation of **Genetics, Robotics, Artificial Intelligence, Nanotechnology** and **Synthetic Biology** also referred to as **GRINS** technology. Cybernetics intercourses with all of them. These will facilitate the radical redesign of our minds, bodies, memories, world views, physiology, offspring, and, as Joel Garreau, in his bestselling book *Radical Evolution*, claims—our very souls.
- GRINS technologies will ultimately direct people to embrace a god of science rather than the true God, along with the spiritual corruption that ensues

NOTE: Of the many tools involved in GRINS's technology, the genetic engineering aspect poses the greatest threat to the preservation of humanity. While robotics, AI, Nano technologies, and synthetic biology will eventually enable significant upgrades to our physical and cerebral capacity, germline genetic engineering will enable permanent alterations to the hereditary profile of the human species. The point being, within one generation, engineered heritable genes could propagate across the human populace on Planet Earth and irreparably corrupt the genome of mankind forever. This is a point worth pausing to consider again.

Genetics

In Greek mythology, the word **chimera** derives from a part-human creature that has body parts from a lion, goat, and snake. In biology, the term **chimera** refers to an organism that has at least two genetically distinct cell lines, whereas most natural organisms only have one unique lineage of DNA in all of their cells.

- In January of **2017**, scientists announced that they had created the first successful human-animal hybrids. The project proves that human cells can be introduced into a non-human organism, survive, and even grow inside a host animal, in this case, pigs. *National Geographic*
- In August of **2019** scientists were making human-monkey hybrids in China. Scientists may have taken a big—and controversial leap by mixing human cells into monkey embryos. *Technology Review*
- In April **2021**, a team of scientists from the U.S., China, and Spain reported they have created the first embryos that were part human and part monkey and kept them alive for up to 20 days in laboratory dishes *Stat News*

CRISPER Cas 9 Gene Editing Technology

- CRISPER stands for Clustered Regularly Interspaced Short Palindromic Repeats which are specialized stretches of DNA
- CRISPER gene-editing technology is an inexpensive gene-editing tool that can be used to cut out and alter bits of DNA
- Cas9 protein is a nuclease, a type of enzyme that can precisely cut DNA sequences allowing for others to be inserted
- CRISPER technology is being hailed as the engine of a new era of genetics. This includes the possibility of permanently modifying the human race via germline manipulation.
- CRISPR is easy to use, and almost anyone can use it
- A danger is, once you know how to stop cancer, you know how to create it
- The main reasons that CRISPR gene editing technology can be extremely dangerous, is that:
 - It can target specific genes
 - It can be delivered to people through viruses
 - It can edit selected groups of individuals, for example, brown-eyed humans or specific races

There is a growing community of home-grown aspirants, known as biohackers, who are using this readily accessible and inexpensive technology to modify living organisms, including themselves. They share their DNA modifications (DNA Mods) with others around the world as a form of crowdsourcing for genetic engineering. Often, these “do-it-yourself” bio-labs are set up in basements, kitchens, and garages throughout the world.

Genetic Vaccines

“*Immunoprophylaxis*” by gene transfer (I.G.T) is altogether different from traditional vaccination. Instead of injecting a piece of a virus into a person in order to stimulate the immune system, synthesized genes are shot into the body.

- This is no longer a traditional vaccination. It’s genetic manipulation.
- Scientists isolate the genes that produce powerful antibodies against certain diseases and then synthesize artificial versions. *What is wrong with the natural versions?*

- The genes are placed into viruses and injected into human tissue, usually muscle

Here is the rub: The viruses invade human cells with their DNA payloads, and the synthetic gene is incorporated into the recipient's own DNA. If all goes well, the new genes instruct the cells to begin manufacturing powerful antibodies. It is widely believed the ripple effects scramble the genetic structure in numerous unknown ways.

To Be Sure: The synthetic gene is incorporated into the recipient's own DNA, thus the altering of the human genetic makeup. Plain and simple. **Think that through...**

Nanotechnology is the science of engineering materials or devices on an atomic and molecular scale between 1 to 100 nanometers (a nanometer is one-billionth of a meter) and provides a matrix for brain-machine interfaces.

Synthetic Biology is a cutting-edge discipline that builds new forms of life and biological functions not found in nature. Rather than building on "natural" nucleic acids, synthetic biology imagines an entirely new form of DNA.

Cybernetics is a technology that merges human brains with machines, and it is progressing at an alarming rate. For example, grown neurons in a laboratory can be used to control robots. Chips implanted in our brains can move muscles in our body at will. Soon we will also have robots with brains created with human neurons that have the same types of skills as human brains have.

The Technological Imperative, a.k.a. *Inevitability Thesis*, states that once a technology is introduced into society, what follows is the inevitable development of that technology. Once set in motion, the developmental progression of any useful technology is unavoidable, unstoppable, and irreversible, even if it poses a catastrophic risk to society itself, for example, the atomic bomb, which started the first arms race.

Enter the Super Soldier

SUPER SOLDIERS are a fictional military soldier concept. These modified humans are capable of operating beyond normal human limits or abilities either through genetic modification or cybernetic augmentation. Currently it is considered the new arms race between militarily developed nations.

Vladimir Putin in October of **2017** stated, *...genetically modified super soldiers are "worse than a nuclear bomb" and could soon become a reality.*

NOTE: while none of these technologies are officially verified, you can come to your own conclusions.

- **Respirocytes** are artificial red blood cells that would give a soldier the ability to hold their breath for extended periods of time and offer a massive jump in cardiovascular endurance. It would serve as a universal blood substitute, preserve living tissue, and eliminate the bends from deep underwater oxygen deprivation.
- **Night Vision** nanoparticles could be injected straight into a soldier's eye. Scientists injected mice with nanoparticles that convert infrared light to *visible light* directly into their eyeballs. The result was a newfound ability to *see in the dark* that lasted for around 10 weeks and seemed to offer no negative side effects.
- **Brain Computer Interface** - This would allow soldiers on the battlefield to communicate while maintaining total silence. This technology extends well beyond inter-soldier communication. In **2018**, DARPA (Defense Advanced Research Projects Agency) announced that an individual equipped with their experimental brain-computer interface had successfully controlled a constellation of three different types of simulated aircraft simultaneously with their mind. This sort of technology would lead to fighter pilots who can control their **AI**-equipped drones seamlessly through thought.
- **Hive Mind Technology** - This technology would further advance the hive mind, or collective intelligence. This is being explored within the context of such fields as biology, robotics, and political science. **Revelation 17:13**
- **Hormone and Gene Therapies** are currently being leveraged to treat, cure, and supplement subjects in order to muscularly enhance ordinary soldiers. Removing myostatin genes (which regulate muscle mass in Belgian Blue Cattle) allows them to develop massive amounts of muscle. Combining treatments within a clinically developed training regimen could result in human beings that are as much as 30% stronger than the most developed soldier.
- **Robotic Exoskeleton Technology** has not yet advanced to the point that it can be used *outside the wire* quite yet but is extremely useful in unloading literally *tons* of equipment, ammunition, and supplies that arrive on pallets. This technology is progressing rapidly via robotics and synthetic biology technologies.
- Chinese military scientists and strategists have consistently emphasized that **biotechnology** would become "the new strategic, commanding heights of the future revolution in military affairs". In **2017**, one prominent Chinese general remarked that "modern biotechnology and its integration with information, **Nanotechnology**, and the cognitive functions, will have revolutionary influences upon weapons and equipment, the combat spaces, the forms of warfare, and military theories."

That said, for now it seems all but certain that future battlefields will see super soldiers of one form or another, be they genetically, biologically, or technologically modified (or perhaps all

three). Being first doesn't always mean best, and like every arms race before it, there are unforeseen consequences for society in general.

Evolutionary Trends

Geological Evolution

2 Peter 3:3-7 states...Scoffers will come in the last days, believing all things continue as they were from the beginning...

This would come to pass in 1830 when geologist Charles Lyell published his influential textbook *Principles of Geology* which popularized the doctrine of geologic uniformitarianism and states, "The present is the key to the past". That is, that the forces acting upon the surface of the earth have been uniform since the beginning.

This view proports that the prevailing biblical theory of catastrophism, the sudden upheavals and cataclysm could be replaced with the slow grind of endless time. These principles were enthusiastically embraced by the atheistic community. This was a means to dismiss, the long accepted cataclysmic view born out with the flood and God's intervention.

Conscious Evolution

- In **1859** Charles Darwin laid the groundwork for the theory of evolution by natural selection in his seminal work, *The Origin of Species by Means of Natural Selection, or the Preservation of Favored Races in the Struggle for Life*. This theory supplied the atheists of that time with a convenient origin devoid of divine accountability and consequence. But this form of evolution is self-directed, so it left man with a vacancy of purpose, i.e., it wasn't going anywhere in terms of man's development. This apotheosis led to the next level, that of **conscious evolution**.
- In **1883**, German philosopher and son of a Lutheran pastor, Friedrich Nietzsche subscribed to evolution but vehemently rejected Darwin's mechanism of natural selection as its driving force. Natural selection was blind and feeble, operating only in the interest of survival.
- Nietzsche supplied evolution with a purpose by claiming it wasn't random or happenstance. Its purpose was to bring about the *Übermensch* (übermenchsha), the Beyond-Man, Overman, Superman, Überman or Superhuman. He claimed the Überman will be as different from us today as man is from an ape (Thus Spoke Zarathustra, Nietzsche's appropriated channel of the ancient Persian prophet). This was to usher in

the pinnacle of evolution. He called the concept the “Will to Power”. To create superior men on planet earth.

- Nietzsche’s protégés include:
 - Helena Blavatsky, the famous occultist who in **1875** founded The Theosophical Society greatly influenced proteges such as Alice Baily, Barbara Marx Hubbard, and Alistair Crowley
 - Aleister Crowley, another protestant pastor’s son, was raised in the faith. Via the philosophy of Nietzsche, he became known as the “wickedest man in the world”, “The King of Depravity”, and “The Great Beast 666”. Around **1904** he coined the injunction “Do as thou wilt” which encourages men to spurn the will of their Maker and abandon every moral inhibition, i.e., be gods ourselves and do exactly as we please.
 - Alice Baily, a Theosophist born into a staunch Anglican family founded the Lucis Trust (originally named the Lucifer Publishing Company) in **1922** which distributed her writings on occult teachings, "esoteric" psychology and healing, astrological and other philosophic and religious themes. She is credited with being the mother and matriarch of the New Age movement, a range of spiritual or religious practices and beliefs which rapidly grew in the Western world during the **1970s**.
 - Barbara Marx Hubbard (**1966**) – Creator of Conscious Evolution — *Evolution by Choice, not by Chance*”. This is the philosophy of directed evolution. Evolution that is directed by the human species. We control our evolutionary upgrade. While consciousness has been evolving for billions of years, conscious evolution is new, though based on Nietzsche’s Uberman.

Enter Transhumanism and the Posthumanism paradigm, which promises immortality of the body.

Spiritual Evolution

Transhumanism is not just a philosophy, it is a transition that takes us from being human, thru to the ultimate goal of becoming Posthuman. Posthumanism is the end game which ensures that we forfeit our candidacy for salvation. What makes us eligible to receive the gift of God is the fact that we ARE **human** beings, that is, *genetically of the seed of Adam*. If you become something other than human, your human kinsman redeemer no longer qualifies for you. The cross of Christ is annulled, and you forfeit your salvation. This is not being taught from the pulpits.

Mega churches are already primed to integrate the doctrine of Transhumanism into their watered-down version of the gospel. The stage is set and taking place. These churches are subtly being led to accept a counterfeit gospel which counteract the reality of the resurrection, with a circumvention of the cross of Christ, a circumvention of the resurrection, and to live eternally through the mechanism of Transhumanism.

By not talking about the dangers of the movement towards Transhumanism, Churches are preparing its congregations to accept the encroaching realities of the satanic plan for mankind. This is categorically disturbing.

The Emerging Church

- The Emerging Church movement (also called the Emergent Church) is the new modern, chic, trendy church theology that is adapting to the social norms, the zeitgeist of the 21st century, trying to be hip and relevant
- They are very light on the gospel, stay away from any of the more disturbing teachings and doctrines of the scripture such as hell, judgment, and things that are deemed as unpalatable for our contemporary society
- Their churches are very much oriented to appealing to millennials and sentiments of the snowflake generation. God is love, there are no other aspects to God, He's one dimensional, etc.

The emergent church is conditioning Christians for the emerging technologies, and the notion that we can and should enhance ourselves to become like gods to better know God. That is, that if we enhance ourselves, we are going to be able to communicate and commune with God, commune with the spirit on a higher level.

This is what the Emergent Churches are teaching. They are doing it in a very subtle way. The teaching of a lot of these modern churches are reminiscent of the teaching of Alice Baily, Barbara Marx Hubbard, Pierre Teilhard de Chardin, and even Neale Donald Walsch who would fit in well in the emergent church.

There are an increasing growing number of Christians who identify themselves as Christian Transhumanists. They believe that becoming transhuman leads to a conscious evolution to Christ, a seamless continuum to deification through technology, that becoming transhuman is becoming more like Christ. They miss the point. Becoming Transhuman and ultimately posthuman is becoming not like Christ at all. They are evolving out of Adam. He is a son of man, son of God, and He is human. In other words, He is a kinsman redeemer only to the offspring of Adam. The Gospel applies only to the offspring of Adam. There's only one stipulation for redemption, you must be human. Point being, there is no such thing as a Christian Transhuman.

The Catholic Church

- The Catholic Church is becoming increasingly divided largely because of the latest Pope, Francis, who is a Jesuit, the first one. The Church has historically kept the Jesuits at arm's length due to their doctrines, one of which is **Conscious Evolution**.

- The Jesuits most influential teacher is Pierre Teilhard de Chardin whose teachings for a long while were outlawed by the Catholic church
- Now we have a Jesuit Pope and what is he doing? Exactly what you would expect a Jesuit to do. The Jesuits invented **Liberation theology** which is a social and political movement within the Catholic church that attempts to interpret the gospel of Jesus Christ through the lived experiences of oppressed people. They, at least since the 60's, are sympathetic to communism.
- So, if one has this sympathetic attitude towards communism, and that is mixed with the teachings of Chardin, it clear that these are the doctrines of Pope Francis
- The notion is that human beings are bad for the environment, and he is very much a proponent of the climate change agenda which believes that mankind is bad for the earth, like a cancer on the earth
- Although in the big picture, the point here is not to eradicate mankind. The point is to force us to evolve. To demonstrate that the current evolutionary condition of the human race is inadequate. That we are dangerous in our current condition. We have to evolve for the sake of the earth. They want the current homo sapiens to go extinct and give birth to the post-human **homo deus**, as it is being described in some circles, the Man-God.
- The idea is to force humans into a directed evolutionary upgrade. And those of those of us who refuse to evolve will be considered the vestigial refuse of directed evolution. This is the future, no question about it.
- The future is not robots walking around like terminator robots killing humans. The game is not about eliminating the human race. The game is about usurping dominion from the human race. This is where it is all heading.

A Reminder: One cannot steal the birthright from away from the offspring of Adam. The birthright is inherent in our genome. We inherit the birthright. This birthright at large is inherited by the human species, not just Christians. The birthright of the human species is dominion over the planet earth. That dominion, that birthright cannot be stolen from us. WE can abdicate authority, but in order to usurp the birthright it is a different thing all together.

Cultural And Sociological Trends

There is a concerted effort to break the link to our inherited humanity. The de-humanization of mankind projects itself in many subtle ways. Technology is being woven into our lifestyles in a way that redefines who we are, how we view ourselves, and how we relate to one another.

Cultural

- Cell phones and texting are quickly becoming the predominate way of communicating among adults and youth
- Studies have found that people with higher social media use were more than three times as likely to feel socially isolated than those who did not use social media as often
- Facial masks deprive people of true connection as non-verbal communication has been an important aspect of social connection. *Consider women in the middle east.*
- Social distancing keeps people from coming together and interacting and sharing ideas as has been for thousands of years
- Vaccine vs. non-vaccine issues are dividing families, churches, communities, etc.
- Children’s cartoons are priming them to accept the transhuman ideology. While not called transhumanism, it is called the Avengers, X-men, Spiderman, Wolverine
- Nostalgia for these superheroes keeps adults engaged and accepted by the masses

Sociological

In the future, pressure to upgrade ourselves, be it technologically or biologically, will be tremendous. Many of these enhancements will be possible due to one’s socio/economic status, thus dividing society between the “superior” humans, and the vestigial population.

- **Family:** Perhaps the most important question is that of **Germline modifications**. If a Christian family, due to their beliefs, chooses not to have any enhancements, and a family down the street decides to, and one of their children marry the other, will the Christian families’ grandchildren be genetically modified also? **NOTE:** Currently it is not required by law for someone with a STD to reveal it to a potential partner, and all that that implies.
- **Education:** If a student chooses to have a cerebral implant allowing him to have heightened brain functionality, how will that affect his fellow student who chooses (for whatever reason) not to have the implant? Perhaps a different “dumbed down” school for those that are not enhanced?
- **Business:** A multi-national corporation who must compete with other corporations around the globe desires a competitive edge against its competition. They must choose between hiring the enhanced candidate or the one who chose not to be enhanced.
- **Sports:** Advances in prosthetics allow enhanced athletes the ability to out throw, jump, run, etc. better than athletes without artificial limbs. How does this affect other athletes choosing not to enhance? When multi-million-dollar contracts are at stake, seems prudent to chop one’s entire arm off and have it replaced with a superior prosthetic. Currently we

see this trend in the Trans-sports arena where men can be altered and compete with women.

All this will inevitably lead to a clear division in society. The classic *have's vs. the have nots*. Superior humans (Homo deus) and the slave class. Slavery of the masses?

Takeaway: The Transhumanism movement will profoundly affect our generation, our children's generation for sure, and most definitely our grandkids. This phenomenon is manifest now in our lifetime. Millennials are being primed along with their children to accept the de-humanization of the human race. Preserving our traditional genetic trademarks of humanity is at the core of what is at stake.

Transhumanism is about the longing to defeat death, our fallen condition. Deep down, our desire is to be super-human, become immortal. We long to get back to being Adam. But there is only one hope. We die because we are wearing the first Adam, and the irrevocable ramification is death. Through Christ, we will live eternally because we will put on the second Adam, the last Adam, the resurrection.
